Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Matches
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  into a syngeneic animal, injecting the transformed cells into a syngeneic animal, selecting those animals having metastasing tumours, and recovering the Met-DNA (see also T72785-90) from them. The human DNA is tagged to assist in its removal or insertion from or into a host or vector. The tagging procedure overcomes the problem of identifying the inserted human DNA sequences in the rat
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         metastasis-inducing DNA (Met-DNA). This method involves transferring the human DNA into a cell line (pref. rat Rama 37) that produces only benign, non-metastasing tumours when injected that produces only benign, non-metastasing functions.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             A DNA tag (T72784) having HindIII, SfiI, NotI and a defective HindIII site is used to tag human DNA from malignant, metastatic cancer cells in a novel method of screening and recovering
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   New isolated metastasis-inducing DNA - used to develop products to
The present sequence is a primer for the PCR amplification of the CDNA encoding an immunoglobulin (Ig), light chain, constant region. The primer can be used in a novel method for the production of recombinant antibodies, comprising the selection of B cells from a lymphocyte fraction, isolation of mRNA from individual B cells,
                                                                                                                                          prodn. of recombinant antibodies - by amplification, cloning and
expression of cDNA generated from B-cell mRNA

                                                                                                                                                                                                      The invention provides isolated Toxoplasma gondii nucleic acids that encode immunogenic polypeptides. The T. gondii nucleic acid molecules, immunogenic proteins and antibodies to the proteins can be used to inhibit T. gondii occyst shedding in a cat due to infection with T. gondii. They can be used for preventing T. gondii infection and for preventing the spread of T. gondii infection. They can also be used for detection T. gondii infection They can be used for preventing the spread of T. gondii infection method can be used to detect parasite cysts or oocysts in feces, e.g. from enteric apicomplexa oocysts such as Cryptosporidium oocysts and Toxoplasma oocysts.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        reverse transcription of the mRNA into cDNA, amplification of the cDNA by PCR and cloning and expression of the cDNA. The recombinant antibodies can be used for diagnosis and/or therapy, while the method avoids the need for intermediate separation of light and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               T. gondii immunogenic protein encoding DNA

                                                                                                                                                   The present sequence is the hamster oral papilloma virus L1 DNA. The L1 protein and DNA can be used for the diagnosis of papillon virus infectious diseases related to cancer, screening for
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            This represents the DNA sequence of the SLDH gene encoding a protein with sorbitol dehydrogenase (SLDH) activity. The DNA also encodes an open reading frame (DRP2) product upstream of the SLDH open reading frame, needed for SLDH activity in vivo. Host cells transformed by a vector comprising the SLDH DNA sequence are used for the recombinant expression of the sorbitol dehydrogenase. Recombinant D-sorbitol dehydrogenase is useful for producing L-sorbose from D-sorbitol. L-sorbose is an important intermediate in vitamin C production.

                                                                                                            CC invention relates to a method of detecting and characterising a stealth CC virus by reacting a sample suspected of containing a stealth virus with a CC probe from a known stealth virus and sequencing the resultant isolated CC nucleotide. The method comprises the steps of: (a) isolating DNA or RNA CC cells showing a viral cytopathic effect; (b) testing the reactivity of CC cells showing a viral cytopathic effect; (b) testing the reactivity of CC cells solated DNA or RNA with a molecular probe that contains at least 18 CC or more contiguous nucleotides identical to sequence previously CC identified from a stealth virus; and, optionally (c) sequencing the CC isolated DNA or RNA molecules that react with the probe. The method is CC used to detect stealth virus in a biological product, food or in the CC curvicument. The method is also used to evaluate agents for their CC inhibitory or stimulatory effects on stealth virus replication and to CC determine capacity of the virus to recombine with and potentially alter CC the nucleic acid sequences of a cell or bacterium.

Oligonucleotide primers were used to amplify each selected ORF from chromosome 2 using genomic DNA as template. The purified amplified products were cloned into the mammalian expression plasmid VRID50 to produce DNA vaccines for immunisation. Blood and sera obtained from groups of mice immunised with doses of vaccine was used to identify stage specific expression of Rifin protein by immunofluorescent antibody testing. The method is useful for determination of subcellular localisation of proteins and for the development of antimicrobial

Alternatively, step (a) comprises providing a nucleic acid construct comprising a coding sequence for the antigen, operably linked to control elements such that the coding sequence can be transcribed and translated in a recipient cell, and delivering the construct to the recipient cell using a gene gun. The antigen of step (a) is selected from collagen, Mt Hsp65, myelin basic protein, myelin oligodendrocyte glycoprotein, myelin basic protein, myelin oligodendrocyte glycoprotein.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         a mammal comprises: (a) providing a particle coated with an antigen against which an immune response is mounted in the autoimmune
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       This DNA sequence encodes the 65 kDa heat shock protein (see W44702), designated Mt Hspb5, of Mycobacterium tuberculosis. This protein cross-reacts with a component of articular cartilage, human Hsp60, that is up-regulated in the joints of arthritic patients. It is proventing an autoimmune disease in the component of the proventing an autoimmune disease in the component of the proventing and autoimmune disease in the proventing and autoimmune disease are also and autoimmune disease and autoimmune disease are also and autoimmune disease are also are also are also a

The invention provided isolated human semaphorin K1 polypeptides. The polypeptides, or nucleic acids encoding them, can be used to modulate cellular physiology by modulating semaphorin K1 activity, e.g. semaphorin K1 polypeptide fragments or antisense nucleic acids can be used to

enhance neurite outgrowth from damaged neurons. The polypeptides can also be used as immunogens, reagents for isolating other semaphorins, or as reagents for screening chemical libraries for lead pharmaceutical agents. The nucleic acids can also be used as probes and primers for diagnostic

by expression of a human cancer associated antigen precursor coded for by a nucleic acid molecule (NAM). The method comprises: (a) contacting a biological sample isolated from a subject with an agent that specifically binds to the NAM, an expression product or a fragment of an expression product complexed with an HLA molecule; and (b) determining the interaction between the agent and the NAM or the expression product as a determination of the disorder. The products and methods can be used in the diagnosis, monitoring, research, or treatment of conditions characterised by the expression of various cancer associated antigens. The invention provides nucleic acid sequences and encoded polypeptides which are cancer associated antigen precursors expressed in human breast
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Sequence 1818 BP; 543
